

Troubadour Completes Phase 1 Drilling at the High-Grade Texas Gold Project

Vancouver, British Columbia, Canada, May 27, 2021 – **TROUBADOUR RESOURCES INC.** (the “Company”) (TSX VENTURE: TR) (OTC PINK: TROUF) is pleased to provide an update on its drilling program at the 2,186-hectare Texas property located near the town of Beaverdell in southern B.C.

Phase one of the diamond drilling program has now been completed with 25 shallow holes totaling 2,090 meters of “HQ” size drill core. The program was designed to test a number of newly identified geophysical and geochemical targets, as well as identify geological controls and the potential source of bonanza-grade samples at the Doorn and Cabin targets and the bulk tonnage-grade andesite and altered granodiorite that host these veins. Phase 1 rock sampling results targeted by drilling at the Doorn target area include **373.8 g/t (12 oz/t) gold** and **1305 g/t (42 oz/t) silver** and **220.1 g/t (7 oz/t) gold** and **827 g/t (26 oz/t) silver** from grab samples* (see Company news release dated March 10, 2021).

**Grab samples are by definition selective. Grab samples are solely designed to show the presence or absence of mineralization, and are not intended to provide nor should be construed as a representative indication of grade or mineralization at the Project.*

All drill holes intersected altered granodiorite or andesite with varying degrees of mineralized veining and alteration halos. The drill core is being processed by the geological team, and samples are being sent to the analytical lab on an ongoing basis.

“Due to the favorable late spring weather and the hard, efficient work of the entire team we were able to complete the planned drill program on time and on budget. We were successful in our stated goals, and we are eagerly awaiting assay results from this program,” states Geoff Schellenberg, Company President.

About the Texas Project

The road accessible Texas property covers historical mineral showings and is located 3 km southwest of the town of Beaverdell and in close proximity to the past producing Beaverdell Mine¹ that was in operation from 1896 to 1991. The property covers ground prospective for vein hosted and bulk tonnage precious metal deposits, based on at least seven historical and newly discovered gold occurrences on the property and geological comparisons with the nearby Beaverdell Mine¹. Several showings are present on the property, including two old mines and many older trenches, pits and adits that expose mineralized veins. The Beaverdell mining camp is predominately known for its silver production and the presence of high-grade gold occurrences makes the Texas property unique and significantly more attractive.

¹ *Referenced nearby historic resources, deposits and mines provide geologic context for the Project, but are not necessarily indicative that the Project hosts similar potential, size or grades of mineralization.*

About Troubadour

TROUBADOUR RESOURCES INC. (TSX.V: TR) (OTC PINK: TROUF) is a public Canadian mining exploration company focused on copper and gold in British Columbia, Canada. The Company is managed by an experienced team consisting of youthful and seasoned professionals with proven track records as mine finders. The newly acquired Texas gold property diversifies the Company's commodity focus and compliments Troubadour's Amarillo copper project located 10 km south of the past-producing Brenda Mine in southern BC and 35 km east of Kodiak Copper's MPD discovery.
